One accountable contact for hand-crafted instruments

Steelbridge Instruments is the trade division of Pillar and Path Consulting (SMC-Private) Limited, a company registered with the Securities and Exchange Commission of Pakistan and based in Islamabad. We supply surgical, dental, veterinary and educational instruments to distributors, clinics, schools and training centres in Europe, the UK, North America and beyond.

Why Sialkot

Sialkot, in Pakistan's Punjab province, has made surgical instruments for more than a century. Its thousands of specialist workshops and manufacturers forge, grind and finish instruments by hand, and supply many of the best-known instrument brands in Europe and North America. We bring that capacity to buyers who want one reliable point of contact rather than many factories.

How we work

1. Your specification	You tell us the patterns, sizes, finish, packing and labelling you need, or send a sample or drawing. Specifications are agreed in writing for every order.
2. Selected manufacturers	We match each order to established Sialkot manufacturers suited to the product, and obtain quotations and samples for your approval.
3. Quality documentation	Our manufacturers provide quality assurance documentation with every lot, such as material certificates, inspection reports and certificates of conformity, as evidence of our quality assurance practice.
4. Checked before dispatch	Each lot is checked against the approved sample and specification, and we send you photographs and the inspection record before shipping.
5. Delivery	We quote FCA/FOB Pakistan or CIP/CIF to your nearest airport or port, with export documents handled by us.

Order quantities

There is no fixed minimum order. We ask only that each order is large enough to make a production run and shipment practical; we are happy to discuss this case by case, including sample and trial orders.

Options

Satin (matt) or mirror finish; tungsten carbide (TC) versions where the pattern allows; laser marking with your brand and codes; individual pouches, boxes or custom kit cases.

Regulatory status

Medical instruments are supplied under the manufacturer's name and CE marking, or under your own label where you act as the legal manufacturer. Manufacturer certificates (such as ISO 13485, CE declaration and FDA registration where applicable) are shared with each quotation. Education and training kits are not medical devices and are labelled for education use only.

General and clinic basics

Operating-theatre and clinic essentials for distributors, GP suppliers and procedure-pack makers.

SB-101

Mayo operating scissors

Variants	Straight or curved, blunt/blunt
Sizes	14.5, 17 cm
